This is a fantastic opportunity for a talented young professional / developer to join a fast growing french tech company, working on improving the health of thousands of people, by monitoring air quality in real time, street by street.

In this role, which is vital to the development of the business, you will be the jack-of-all-trade and will work in collaboration with experienced developers and researchers from France and China. You will be responsible for developments of software applications, deploying databases and servers-side scripts, as well as prototyping new software and applications compliant with chinese standards; Knowledge on geographic information systems (GIS) and related software will be appreciated, as well as a taste for mapping and spatial data-visualization.

If you are resourceful, smart, and motivated then get in touch today!

**Day to Day assignments include:**

- Software development and uses under Windows and Linux/Unix operating systems
- Server administration
- Geostatistics
- Database management

**Qualifications:**

- Minimum of 2 to 3 years of working experience
- Software development in: **Python, R, 4Tran, CRON**
- Knowledge of GIS (Geostat), such as QGIS or ArcGis, and databases environments
- Ability and willing to use new software in the air quality field with training
- Knowledge of geostatistics is desirable

**Language Skills:**

Fluent in Mandarin and English (spoken and written)

**Relocation / Travel:**

Permanent full-time position based in our Hangzhou offices.

Business travels to Beijing (China) or Nantes (France) might be included with your job position if necessary.

**About us:**

Futuris Environmental Technology provides innovative hardware and software tools and platform to understand and predict the numerous parameters of the environment. Our goal is to provide accurate, precise and useful data to companies, local governments, or health organizations to help them in their task of improving life and health quality.

One of this new tool is AtmoTrack, the first network of sensors that maps air quality in real time.

The headquarters of the company are based in Nantes, France, and after covering Paris since 2016, is now expanding its network and services to China, starting by Hangzhou.
